DETAILED ACTION

1. A translation of the foreign priority papers has been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15. As such, the previous rejection under Shekel (US 6,799,370) has been withdrawn.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Frank Jordan on May 16, 2007.

In the Specification:

Page 1, Line 4: the following sentence is added before the first line of the section titled "Field of the Invention".

--This application is a divisional of United States Application Number 09/942,857 filed on August 30, 2001, which issued as United States Patent Number 6,926,793 on August 9, 2005.--

Allowable Subject Matter

3. Claims 2-6 (renumbered 1-5) are allowed. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Zielinski (DE 3042609). Zielinski discloses an apparatus for joining optical fibers in which first and second pins 1,4 (associated with first and second optical fibers) are positioned within a coupling sleeve 5 and subsequently rotated into alignment with a microscope (imaging means). While not expressly depicted, it is evident that the coupling sleeve must be held by a support structure or clamping element and such is seen to constitute a ferrule clamping means. Furthermore, as noted above, each of the pins associated with an optical fiber is rotated after inspection by a microscope- the elements that are connected to each pin/fiber assembly and cause them to rotate are seen to constitute fiber cable clamping means. However, the apparatus of Zielinski is not capable of imaging a leading end of the fiber cables, wherein each of said fiber cables is axially parallel to and radially spaced from each other of said cable. It is noted that the method of Zielinski involves imaging markings on the outside of pins 1,4 that house optical fibers 2,3 and subsequently rotating said pins (as opposed to imaging leading ends of fibers). Additionally, the respective fibers of Zielinski are axially parallel to one another (in the same plane) but they are not axially spaced.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
